With remote controller, adjustable outpower

1. Low power consumption. Can work long time without stop.
2. Effectively making subsections. Just interfering downlink and no interception on the base station.
3. Extreme portability. The weight for machine itself and antenna is just 15KG
4. Taking use of super-high frequency and mini-power interference technology. High efficiency.
5. Slow start up design of circuit. These elements can maintain the stable operation condition with high integration.
6. The jammer has 4 antennas, each output 2-3 watts (output is adjustable)
7. Adopt aluminium alloy materials and obtain high efficiency in heating and shielding
